

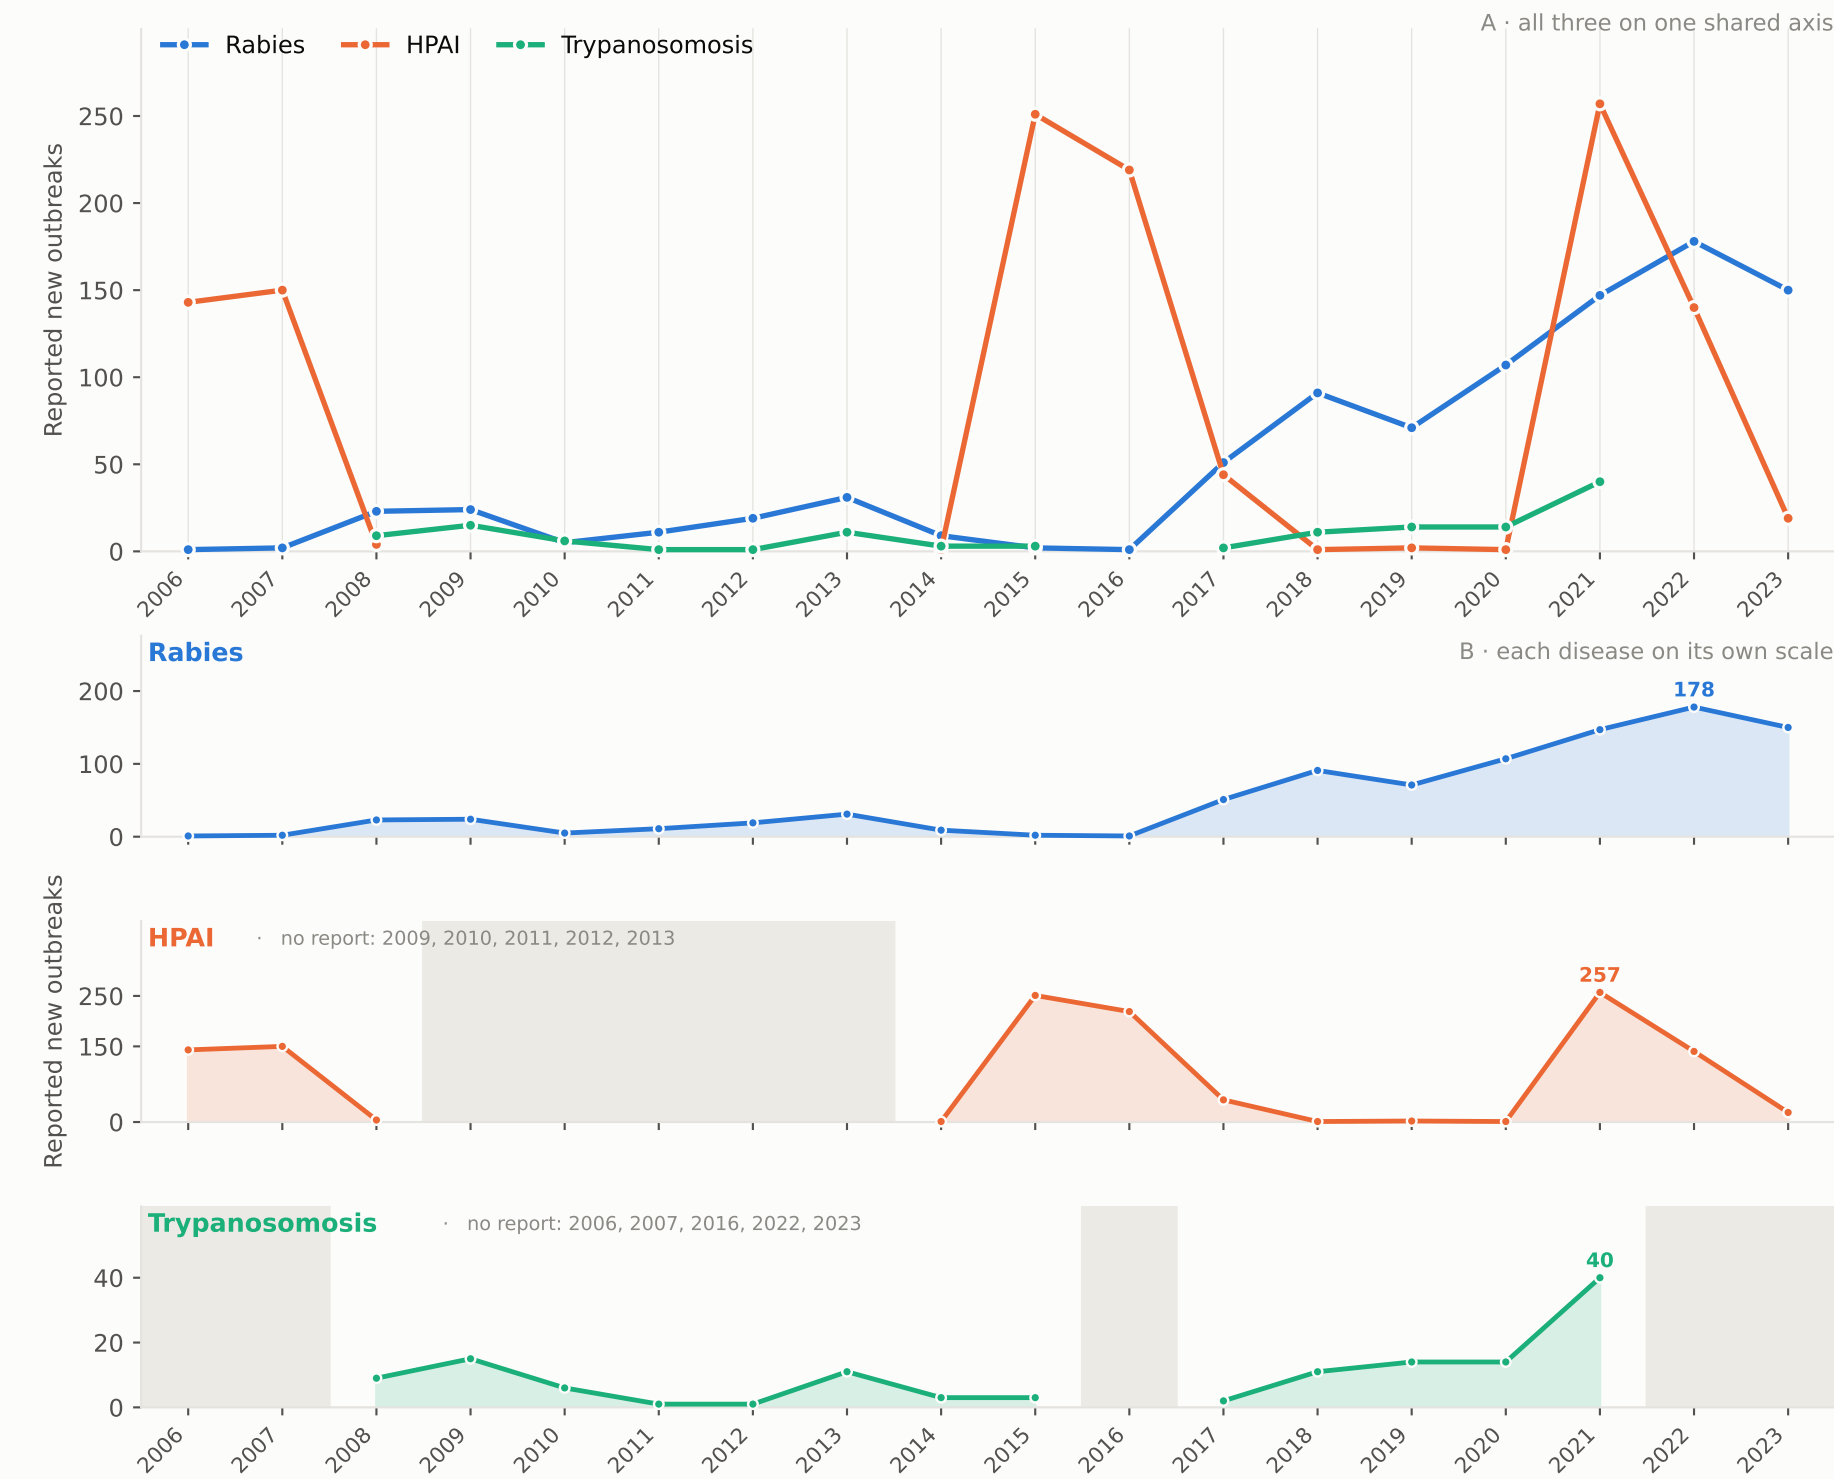

Figure 1. Temporal patterns of reported zoonotic animal disease outbreaks in Nigeria, 2006-2023

Source: WOAHAH WAHIS six-monthly animal disease reports. Points are years with a report; a break in a line is a year with NO report, which is not the same as a reported zero.

Panel B repeats the same counts with an independent y-scale per disease, so the shape of the smaller series stays legible; grey bands mark years with no report. Trypanosomosis reporting ends after 2021 because the WOAHAH disease name itself ends there — 'Trypanosomosis (tsetse-transmitted) (-2021)'. The 2022-2023 blanks are a classification artefact, not an observed decline.
